<b>Preface</b>	<b>xi</b>
1. Introduction	
1.1 Motivation	1
1.2 Important features of this textbook	5
1.3 Organization of textbook	6
References	11

## I

---

### Theory and background

2. Fundamentals and data collection	
2.1 Introduction	17
2.2 Crash process: drivers, roadways, and vehicles	18
2.3 Crash process: analytical framework	20
2.4 Sources of data and data collection procedures	22
2.5 Assembling data	36
2.6 4-stage modeling framework	37
2.7 Methods for evaluating model performance	44
2.8 Heuristic methods for model selection	51
References	55
3. Crash—frequency modeling	
3.1 Introduction	59
3.2 Basic nomenclature	60
3.3 Applications of crash-frequency models	60
3.4 Sources of dispersion	63
3.5 Basic count models	65
3.6 Generalized count models for underdispersion	71
3.7 Finite mixture and multivariate models	75
3.8 Multi-distribution models	77
3.9 Models for better capturing unobserved heterogeneity	82
3.10 Semi- and nonparametric models	85
3.11 Model selection	94
References	96

4. Crash-severity modeling	
4.1 Introduction	103
4.2 Characteristics of crash injury severity data and methodological challenges	104
4.3 Random utility model	105
4.4 Modeling crash severity as an unordered discrete outcome	107
4.5 Modeling crash severity as an ordered discrete outcome	119
4.6 Model interpretation	130
References	131

## II

### Highway safety analyses

5. Exploratory analyses of safety data	
5.1 Introduction	135
5.2 Quantitative techniques	136
5.3 Graphical techniques	161
References	176
6. Cross-sectional and panel studies in safety	
6.1 Introduction	179
6.2 Types of data	180
6.3 Data and modeling issues	188
6.4 Data aggregation	193
6.5 Application of crash-frequency and crash-severity models	194
6.6 Other study types	211
References	214
7. Before–after studies in highway safety	
7.1 Introduction	219
7.2 Critical issues with before–after studies	220
7.3 Basic methods	223
7.4 Bayesian methods	232
7.5 Adjusting for site selection bias	239
7.6 Propensity score matching method	242
7.7 Before–after study using survival analysis	244
7.8 Sample size calculations	246
References	255
8. Identification of hazardous sites	
8.1 Introduction	259
8.2 Observed crash methods	261
8.3 Predicted crash methods	268
8.4 Bayesian methods	273
8.5 Combined criteria	277

---

Contents	ix
8.6 Geostatistical methods	278
8.7 Crash concentration location methods	282
8.8 Proactive methods	285
8.9 Evaluating site selection methods	288
References	295
9. Models for spatial data	
9.1 Introduction	299
9.2 Spatial data and data models	300
9.3 Measurement of spatial association	300
9.4 Spatial weights and distance decay models	306
9.5 Point data analysis	309
9.6 Spatial regression analysis	318
References	332
10. Capacity, mobility, and safety	
10.1 Introduction	335
10.2 Modeling space between vehicles	336
10.3 Safety as a function of traffic flow	338
10.4 Characterizing crashes by real-time traffic	340
10.5 Predicting imminent crash likelihood	346
10.6 Real-time predictive analysis of crashes	348
10.7 Using traffic simulation to predict crashes	354
References	364

---

### III

---

#### Alternative safety analyses

---

11. Surrogate safety measures	
11.1 Introduction	369
11.2 An historical perspective	370
11.3 Traffic conflicts technique	371
11.4 Field survey of traffic conflicts	373
11.5 Proximal surrogate safety measures	374
11.6 Theoretical development of safety surrogate measures	383
11.7 Safety surrogate measures from traffic microsimulation models	394
11.8 Safety surrogate measures from video and emerging data sources	395
References	397
12. Data mining and machine learning techniques	
12.1 Introduction	399
12.2 Association rules	400
12.3 Clustering analysis	403
12.4 Decision tree model	405

12.5 Bayesian networks	412
12.6 Neural network	416
12.7 Support vector machines	423
12.8 Sensitivity analysis	426
References	427

---

## IV

### Appendices

Appendix A: Negative binomial regression models and estimation methods	429
Appendix B: Summary of crash-frequency and crash-severity models in highway safety	441
Appendix C: Computing codes	467
Appendix D: List of exercise datasets	475
Index	477
