The following pavements are located close by. Survey (visually) each of these pavements (from the curb -- watch out for traffic).

(1) Identify the types of distress manifest by each pavement and rank the level of severity associated with it as: Low, Medium, or High.

(2) List the factors (i.e. design, construction, or climatic related) that you feel should be considered in determining the cause of the distress

(3) List the specific possible causes of the major distresses and rank them in order of priority.

Think carefully what factors should be considered in making this ranking.

Pavements

(a) Ross Street from Ireland to Spence Street.

(b) Spence Street from University Drive to Ross Street.

(c) Bizzel Street from University to Ross Street.

(d) Circular drive in front of Systems Administration building.

(e) Tarrow and Krenek Tap next to Central Park in College Station.
